

# EXTRUSION PULLERS

## STANDARD PULLER

Unit features completely variable pressure on the top head that can be set to put a specific amount of pressure on the product or can be set to float on the product very easily.

Though not standard, flexible options can be added, such as tension control, as shown.

Dual drive motors provide reduced maintenance and the ability to float the head.

Safety features include; adjustable guard, interlocked doors that allow for easy access, and head that pops up during an emergency stop.

**This information only represents a few of the machines we have done.  
Call us and discuss your exact needs today.**

*Together we build a better product.*
