

# STRIP PULLERS

## TEAR STRIP PULLER

Bead puller has adjustable spring tension pinch roller. An adjustable arm brings the tear strip from the extrusion around an idler roll that insures the most wrap around the grip wheel for maximum pull. An adjustable chute guides the tear strip into a box for disposal. Guard opens for easy access and threading.

Variations on the same theme show our versatility in Tear Strip Pullers. Different needs such as heavier frame, taller height, variation in product width and guarding requirements can be considered. Units are standard with 110VAC and Fincor Drive. Other options available.

Units are available with a variety of options such as left or right directional operation, optional air pressure pinch roller, puller width from 4" to 6" or made to order, as well as roll covers in natural rubber, gum rubber, or silicone rubber.

**This information only represents a few of the machines we have done.

# STRIP PULLERS

## STOCK FEEDER

Our standard design features product empty and product stuck alarm horn with variable speed DC control.

## Quality Puller/Hugger Belts For extrusion equipment

- ◆ Standard V-Groove Belts, with options of flat, timing and other special types.
- ◆ Standard Belt width of 4", optional widths from 2 to 12" in varied increments.
- ◆ Belt thickness range from 1/16 to 5" in varied increments.
- ◆ Large varieties of covers, materials and foundations possible.

- ◆ Recovered Belts: We also reprocess with new cover placed on stripped foundation.

Our line of Pullers are operator friendly, and include features such as dual motors for reduced maintenance as well as the ability of the unit's top head to be set for variable pressure or floating on the product, in addition to many safety features.

Other services include rebuilding/refurbishing used equipment to like new condition.
